Summary

Full-stack developer specializing in Next.js, React, and Spring Boot. Built and shipped production websites for paying clients, plus REST APIs and AI-integrated applications. Strong in performance optimization, responsive design, and Agile delivery.

Skills

Frontend: Next.js, React, TypeScript, JavaScript, HTML, CSS, Tailwind CSS

Backend: Java, Spring Boot, Node.js, REST APIs, WebSocket

Databases: MySQL, PostgreSQL, MongoDB

DevOps & Cloud: Docker, Vercel, Git/GitHub

Tools: Postman, JIRA, SEO Optimization

Experience

Software Engineer

October 2024 – May 2025

Flyout Tours LLC (Remote)

Next.js, React, TypeScript, Supabase, PostgreSQL, Tailwind CSS

- Solely architected and developed a **full-stack travel booking platform** (flyouttours.com) from scratch — handling frontend, backend, database design, DevOps, and payment integration end-to-end.
- Designed and normalized a **PostgreSQL schema of 20+ relational tables** with Row-Level Security (RLS), handling complex relationships across products, suppliers, pricing tiers, bookings, and user roles — some tables exceeding **2,000+ records**.
- Integrated **3 payment gateways** (Tabby, Tamara, Ziina) with server-side price verification, HMAC-SHA256 webhook signature validation, idempotency checks, and race condition handling to ensure consistent financial transactions.
- Built a **serverless REST API** architecture on Vercel with JWT authentication, rate limiting, and input sanitization — platform currently serving **400+ active users** with real bookings and live payments.
- Configured DNS records, SSL certificates, and reverse proxy settings on Hostinger for production deployment — independently resolved a PostHog reverse proxy conflict with the SSL certificate chain under live conditions.

Frontend Engineer

April 2025 – Present

StreetOne Trading

React, JavaScript, WebSocket, REST APIs, Java (Backend on AWS)

- Built the **frontend for a live trading platform** using React, integrating with a Java backend hosted on AWS.
- Developed real-time **interactive price charts and quote displays** using WebSocket connections for live market data updates.
- Implemented **order placement and order management** UI flows, including order entry, modification, and status tracking.
- Built the **accounts module**, covering balances, holdings, and transaction history views.
- Collaborated with backend engineers to consume and integrate REST APIs, ensuring consistent data flow between Java services and the React frontend.

Projects

Agent Ascend — Multi-Model AI Orchestration Platform | *Next.js, Node.js*

AI Hackathon 2026

- Built an **intelligent multi-agent LLM orchestration platform** that classifies prompts and dynamically routes tasks to the most suitable model based on category, complexity, token cost, and response time.
- Integrated **4+ LLM providers** (OpenAI, Gemini, Claude, and others) into a unified routing layer, eliminating the need for separate provider dashboards.
- Built a **task decomposition engine** that breaks complex prompts into subtasks, assigns each to a specialized agent, and aggregates results into a single response.
- Implemented a **difficulty detection and model recommendation system**, advising estimated cost, token usage, and response time before execution.
- Designed a **visual dashboard** showing prompt flow, task decomposition, model assignment, and execution timeline.
- **Runner-up** at AI Hackathon 2026 among competing teams.

DevFlow | *React, TypeScript, Node.js, PostgreSQL, WebSockets, Redis, Docker, AWS*

- Built a **full-stack project management tool** designed around developer workflows, featuring GitHub integration, sprint tracking, and real-time collaboration.
- Implemented **real-time collaboration via WebSockets** with live presence indicators.
- Built **deep GitHub integration**, automatically syncing PRs, commits, and issues.
- Developed **sprint velocity tracking** with burndown charts and cycle time metrics.
- Implemented **role-based access control** with team workspaces and audit logs.

Awards & Certifications

- **Winner – Webathon, Festronix (2026):** Ranked 1st among teams from across the state in a national-level website building competition competing solo among all teams
- **Runner up at Hyderabad Biggest AI Hackathon:** Ranked among top 16 teams out of more than 300+ teams for Building a Innovative AI Powered solution for Real World Problem
- **2nd Place – National Mathematics Day Competition, Vardhaman College:** Secured second position in a campus-wide mathematics competition, demonstrating strong analytical thinking and problem-solving skills.
- **NPTEL – Programming in Java (2025):** Secured a score of **94%**, demonstrating strong proficiency in object-oriented programming, core Java concepts, and problem-solving.

Education

B.Tech. Computer Science and Engineering

Vardhaman College of Engineering, Hyderabad

Graduated: 2028

CGPA: 8.94 / 10
